OTHMANE B.

R&D Engineer · Cyber Threat Intelligence · Malware Analysis · Detection Engineering

Paris, France | othmaneb@proton.me | **Portfolio: indestiny0xff.github.io** | Blog: indestiny0xff.github.io/blog
github.com/indestiny0xff | github.com/indestiny0xff/HuntingBadGuys-PUBLIC | x.com/indestiny_cti

SUMMARY

R&D engineer specialized in cyber threat intelligence, malware analysis and detection engineering, and creator of HuntingBadGuys, a threat infrastructure intelligence platform. Master's degree in Intelligence & Cyber Threats obtained in 2026. Seeking a technical CTI, malware analysis, detection engineering or blue team role from September 2026, in France or abroad.

EXPERIENCE

R&D Engineer · Gatewatcher

Cyber Campus, Puteaux, France | Sep 2025 - Present

- Designed a Suricata ruleset enrichment engine powered by LLMs and threat intelligence; it adds context and verdict guidance to every NDR alert and reduces manual triage effort for SOC analysts.
- Conducted an applied study on LLMs and established a methodology for processing information efficiently with consistent, reliable results on business tasks; it now underpins the enrichment engine.
- Automated the production of vulnerability monitoring reports on critical vulnerabilities, turning a multi-hour manual process into a repeatable pipeline delivered to clients.
- Designed Suricata and YARA detection rules extending product coverage of current attacker tooling; produced threat actor intelligence reports feeding detection priorities and client briefings.

CERT Analyst · OWN Security

Paris, France | Sep 2023 - Jul 2025

- Drafted technical reports on APT and cybercrime campaigns, used directly by clients to adapt their defensive posture.
- Ran strategic monitoring of ransomware and infostealer ecosystems, providing early visibility on emerging groups and tooling.
- Performed malware analysis covering infection chains, obfuscation and encryption methods, and turned the findings into actionable intelligence.
- Mapped cybercrime groups' infrastructure in support of long-term tracking and attribution.

Security Automation Intern · ORHUS

Jul 2023 - Aug 2023

- Analysed Google Workspace security processes (identity management, access controls, configuration baselines) and developed Python tooling automating configuration audits, policy enforcement checks and monitoring workflows.
- Recommended security posture and architecture improvements focused on risk reduction, scalability and operational efficiency.

PROJECTS

HuntingBadGuys. (github.com/indestiny0xff/HuntingBadGuys-PUBLIC) Threat infrastructure intelligence platform designed and built end-to-end: 16+ concurrent collection modules (DNS, WHOIS, HTTP chains, Certificate Transparency, BGP/ASN, GeoIP), a 65-pattern IOC extraction engine, binary analysis (hex, disassembly, decompilation, DIE), an AST-based query language, pHash/MinHash clustering, automated feeds (OpenPhish, URLhaus, ThreatFox) and one-click STIX 2.1 reports.

EZ Tools on Linux. (github.com/indestiny0xff/Eztoollinux) Runs Eric Zimmerman's 17 Windows forensic tools natively on Linux (host install or Docker), with allez, an orchestrator that locates every artifact on a mounted drive, parses it and loads the results into one SQLite database, plus a web UI with searchable tables and a SQL console.

CLICKFIX Analytics Platform (SEKOIA). Automates ClickFix infection-chain analysis from a single URL: static and dynamic analysis, VM execution, malware identification, and LLM reasoning with MCP integrations.

CLAAR (Oteria team project). Collaborative anti-disinformation platform introducing Indicators of Disinformation (IODs); designed and integrated the browser extension collecting from TikTok, Telegram and websites through their APIs.

Telegram Intelligence Collection. Automated monitoring of cybercriminal Telegram channels via the Telegram API, extracting aliases, wallets and infrastructure indicators; delivered the school talk "Telegram OSINT 101".

PUBLICATIONS & RESEARCH

- Research blog: indestiny0xff.github.io/blog · reverse engineering, malware analysis and threat research write-ups.
- Data breach: the operations of Charming Kitten revealed · Gatewatcher Lab article.

SKILLS

Languages	Python, C, PowerShell, Bash, x86/x64 assembly
Reverse engineering	Ghidra, IDA, x32dbg/x64dbg, Windows/Linux kernel internals
Detection	Suricata, YARA, Sigma, KQL
CTI & OSINT	MISP, OpenCTI, Intel 471, TRM Labs, Urlscan, VirusTotal, Censys, Shodan, API reverse engineering
DFIR & SOC	Volatility, Autopsy, EZ Tools, Wazuh, Elastic
Systems & tooling	Linux, Docker, Git, virtualization

EDUCATION & CERTIFICATIONS

Master's degree	Intelligence & Cyber Threats, Reverse Engineering specialization, Oteria Cyber School, 2024-2026 (degree obtained)
Certifications	Windows Malware Analysis for Hedgehogs (Beginner) and Malware Analysis: Intermediate to Expert, by @struppigel; TOEIC 930/990
Spoken languages	Arabic (native), French (fluent), English (advanced, TOEIC 930)
